

Items needed from Grant

Last updated: August 2026. Hand this document to Grant.

For each item: what we need, what format, and where it will live on the site.

1. Interactive quiz — "Questions for Program Leaders"

What we need from Grant: The 12 diagnostic questions from the "Questions for Program Leaders" list, converted into a scored self-assessment. For each question we need:

- The question text
- 3–5 multiple-choice answers per question
- A score weight for each answer (e.g., "Yes, we do this regularly" = 3 points, "We've discussed it" = 2, "Not yet" = 1, "Doesn't apply" = 0)
- 3–4 result tiers with interpretive text (e.g., "0–12 points: Early stage — your program would benefit from exploring accountability frameworks. Start with...", "13–24 points: Developing — you have promising practices but gaps remain...", etc.)

Preferred format: A Google Sheet with columns: Question | Option A (score) | Option B (score) | Option C (score) | Option D (score), plus a separate tab with result tiers.

Where it lives on the site: We will build a self-contained JavaScript quiz widget embedded on `why-nplb.html` or a new `quiz.html`. No backend needed — all scoring happens in the browser. The user clicks through questions, sees their score, and gets a recommendation linking to relevant site resources.

2. Healthcare leader resources — content from the PowerPoint topic tree

What we need from Grant: The actual content behind the section titles on the topic tree. This includes detailed recommendations, toolkits, and guidance documents for:

- ED Inflow Recommendations
- ED Throughput Recommendations
- ED Outflow Recommendations
- ALC Recommendations
- Intake Areas & Low-Acuity Diversion

- Rationing & Ethical Allocation
- The One vs. the Many
- Matching Demand & Capacity
- Reducing Variability
- Task Shifting
- Overcapacity Protocols (Levels 1–4)

Preferred format: Each as a PDF or Google Doc. PDFs are better for downloadable toolkits. If content already exists in Google Docs, share the folder and we will link from the site.

Where it lives on the site:

- PDFs go into a `downloads/` folder in the repo and are linked from the relevant card on `strategies.html` or `resources.html`
- Google Docs can be embedded via iframe or linked directly
- Grant's preference: we recommend PDFs hosted in the repo (no dependency on Google Drive availability, and they work offline)

3. Teaching materials

What we need from Grant: Slide decks, workshop materials, training guides, and presentation files.

Preferred format: Export PowerPoint files as PDF. If slide decks need to remain editable, provide both the original file and a PDF export.

Where it lives on the site: `downloads/` folder in the repo, linked from the Teaching Materials section on `strategies.html`.

4. PDF downloads for the site

Several pages have "download" buttons that currently go nowhere. Grant needs to provide the actual files:

Download	Page	Format needed
Implementation Guide (full)	<code>accountability.html</code>	PDF
Protocol Overview	<code>resources.html</code>	PDF

Download	Page	Format needed
Award Application Form	awards.html	PDF or Word doc
Budget Template	awards.html	Excel or PDF
Submission Guidelines	awards.html	PDF
System Improvement Toolkit	resources.html	PDF
Quality Metrics Template	resources.html	PDF or Excel
Process Mapping Guide	resources.html	PDF
Risk Assessment Framework	resources.html	PDF

Where it lives: downloads/ folder in the repo, linked directly from the relevant page. No external hosting dependency.

5. Patient / public advocate content

What we need from Grant: Content for patient.html — information aimed at patients and public advocates explaining:

- Why care delays happen
- What the fund is doing about it
- How to support system improvement
- How to donate and where donations go

Preferred format: A Google Doc or plain text file. We will convert to HTML and place on patient.html.

Where it lives: patient.html (currently a placeholder page).

6. Healthcare stories

What we need from Grant: 3–5 anonymized case studies or narratives illustrating:

- How care delays impact real patients
- How accountability frameworks or process improvements resolved a bottleneck

- Before/after impact

Preferred format: A Google Doc — one story per section with a title, body text (~200–400 words each), and any anonymized data or quotes.

Where it lives: `strategies.html` Healthcare Stories section (currently "coming soon"). Each story becomes a card or expandable section.

7. Media hub content

What we need from Grant:

- **YouTube:** A YouTube channel URL or a list of specific video URLs to embed. If the foundation plans to create a YouTube channel, we can embed the channel or individual videos.
- **Podcast:** If Grant or Dr. Helman plan to produce podcast episodes for the fund, we need the RSS feed URL or a SoundCloud/Spotify playlist URL. The EM Cases podcast embed is already live as a placeholder example.
- **Op-eds / press:** Any published articles or news coverage we should link to or display.

Preferred format: A list of URLs. No files needed.

Where it lives: `media.html` (already stubbed with an EM Cases embed and a YouTube placeholder).

8. References

What we need from Grant: A structured list of foundational studies, papers, and sources cited throughout the site.

Preferred format: A Google Sheet or Doc with columns: Title | Authors | Journal | Year | DOI or URL. We will format it as a reference list on `strategies.html`.

Where it lives: `strategies.html` References section (currently "coming soon").

9. Assets

Item	Format needed	Where it lives
Dr. Lorraine Kane headshot	High-res photo (JPEG or PNG), at least 500×500px	media/ folder, displayed on board.html
Charitable registration number	Text (format: 123456789 RR 0001)	Donate section on index.html

10. Newsletter setup

Grant (or someone at the foundation) needs to create a free Mailchimp account (mailchimp.com, free tier: up to 500 contacts). Once created, provide us with the embedded form HTML snippet or the form action URL. We will embed the signup form on the site, replacing the current mailto: workaround.

Alternatively, if the foundation prefers a different provider, any service that generates an HTML embed form will work. See [docs/email-newsletter-research.md](#) for a comparison.

Summary: what formats to send us

Content type	Send us
Text content (stories, patient page, quiz questions)	Google Doc or plain text
Structured data (quiz answers, references, funding tiers)	Google Sheet
Slide decks, workshop materials	PDF exports
Downloadable documents (guides, forms, templates)	PDF files
Images (headshots, photos)	JPEG or PNG, high resolution
Video/podcast links	URLs (YouTube, SoundCloud, Spotify, RSS)

Content type	Send us
Charity number	Text
